

I enjoy listening to my satellite radio. I travel a great deal by car from 100 to 700 miles a day. It's great to be able to tune in a city that I'm going to and receive traffic and weather. I can adjust my route so that I can avoid delays. I receive this information long before I can pick up a local station and from past experience by the time I receive a local station I'm usually in the backup. I now have the ability to receive this information even when there is no radio programming available. For instance recent fires in the area knocked out radio and repeater towers leaving several listeners in the dark. If it wasn't for satellite I wouldn't have been able to receive news or traffic updates. I feel that if I'm paying for this service I should not be limited. One of the reasons I joined was to be able to receive traffic and weather conditions from several cities especially when I have to go out of state. Satellite Radio should be allowed to offer these services. Just like all other form of communication they play a vital role by providing information whether it's for listening, commuting, traveling or in time of disaster the information that is available is greatly appreciated. It may also be the only signal available so limiting what satellite radio can offer can only hurt the public.
